Part 1

Tutorial

The tutorial will guide you through a step-by-step introduction to using ParaSheet. You'll be directed through the development of a spreadsheet that will progressively familiarize you with ParaSheet's features and capabilities.

Although this tutorial is a thorough introduction to the application, some concepts are not explored in full detail. If you need further information, turn to the Concepts and Command Reference sections.

Each chapter is a complete unit, so you can work through one, and then come back to the next at a different time without losing anything. If you sit down to do the entire tutorial at once, you should be able to finish it in about two-three hours.

Part 1

Tutorial

Chapter 1
Basics

Starting Up ParaSheet 7
Parts of ParaSheet 8
Selecting Cells 12
Building a Spreadsheet 13
Conclusion 20

Chapter 2
Intermediate

Working with Formulas 21
What Is a Formula? 22
Entering Simple Formulas 23
Using a Function in a Formula 25
Copying Formulas 28
Saving Your Document 33
Conclusion 33

Chapter 3
Advanced

Working with Rows and Columns 35
Formatting a Cell's Contents 41
Creating Reports 45
Conclusion 53
