Samples

Choosing the *Samples* command opens a folder in the Workspace Manager. This folder contains a number of sample ParaSheet documents (including those used in the Tutorials at the beginning of this manual). To view one of these samples, select it and double-click or choose *Open* from the Workspace Manager's File menu.

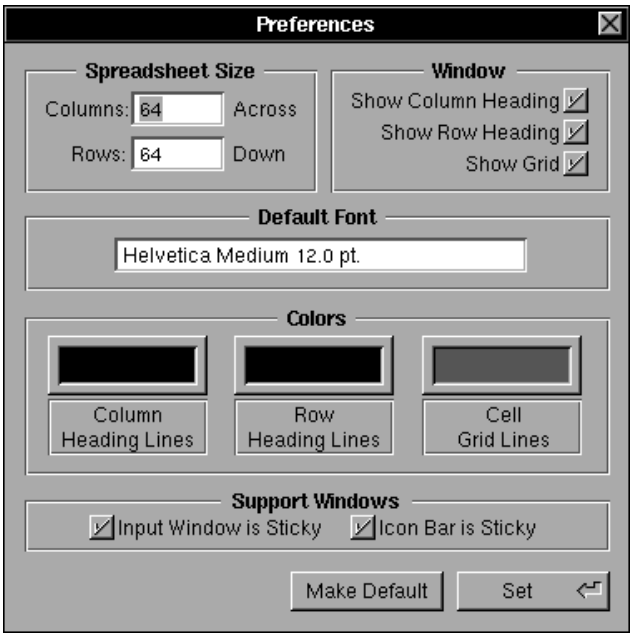
Suggestion

This command raises the *Suggestion* panel. Use it to provide Lighthouse Design with feature suggestions (or bug reports).

After entering some basic information about yourself and your company (which ParaSheet will remember session to session), click the *Compose in Mail* button. The information you provide will be automatically placed in a NeXTMail Send window, addressed to the ParaSheet team at Lighthouse. Enter your suggestion there and click the Send window's *Deliver* button.

If you can't reach us with electronic mail, please print and mail your suggestion to us at the postal address written on the Suggestion panel. Or, feel free to fax it to the number shown in the panel.

We look forward to hearing from you.



Once you set your preferences, click the *Set* button to apply changes to the spreadsheet you are currently working in.

Click *Make Default* to apply your changes to new documents. If *Make Default* is selected, ParaSheet will create new documents with these specifications until you change them.

For more information about using the Preferences panel, refer to the "Setting Preferences" section on page 63.

License

The panel raised by the *License* command indicates whether your copy of ParaSheet is registered, and to whom. If the top line of this panel reads "This program is unregistered," you will be unable to save or print your work. The ParaSheet Installation Guide that came with your software explains how to use the License panel to register your copy of ParaSheet.

Chapter 14

Info

The Info menu is the traditional location of information about a program. Standard commands here allow you to open the Info Panel and set preferences. Here you will also find commands to register your ownership of ParaSheet and to send suggestions to Lighthouse Design.

Info Panel

The panel raised by this command provides a quick summary of ParaSheet and its authors. Look to the *Info Panel* to see exactly which version of ParaSheet you're running and for Lighthouse Design's contact information.

Preferences

Preferences are settings that you use to customize ParaSheet's default behavior. When *Preferences* is selected, the following panel is raised:
