Part 3

Command Reference

The Command Reference chapters serve as an encyclopedia of the commands in ParaSheet. Each chapter covers a different menu, and details each command found there.

In the headings in this section, the name of a command is often followed by a character in parentheses—the command's keyboard alternative. Holding down the Command key and typing the keyboard alternative is the same as choosing the command from its menu.

Please note that some standard commands and menus, such as the Hide and Quit commands, or the Windows and Services menus, are not documented here. For help with these commands and menus, refer to your NEXTSTEP User's Guide.
